DETAILED ACTION

Election/Restrictions

This application is a 371 of PCT/JP03/07148.

Claims 1 - 19 are pending.

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group, I claim(s) 1-7, and 11-19, drawn to a process for producing PNPase in an E. coli transforming with a PNPase gene derived from prokaryotic organism.

Group, II claim(s) 10, drawn to a process for producing polyinosinic acid and polycitidylic acid by using PNPase.

2. The inventions listed as Groups I - II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The process for producing PNPase of Group I and methods of use of PNPase of Group II are each unrelated and chemically distinct. The only shared technical feature of these groups is that they all relate to a polypeptide PNPase derived

Art Unit: 1652

from prokaryote. However, this shared technical feature is not a "special technical feature" as defined by PCT Rule 13.2 as it does not define a contribution over the art. According to the search report (IPER) a DNA encoding PNPase is known in the art (Regnier et al. Nucleotide sequence of the pnp gene of Escherichia coli encoding polynucleotide phosphorylase. Homology of the primary structure of the protein with the RNA-binding domain of ribosomal protein S1, J Biol Chem. 1987 Jan 5; 262(1): 63-8 and Crofton et al. Cloning and orientation of the gene encoding polynucleotide phosphorylase in Escherichia coli, J. Bacteriol. 1983 Apr; 154(1): 58-64, see IDS). Thus, a polynucleotide phosphorylase (PNPase) protein does not make contribution over the prior art.

3. The methods of Groups I to II do not have unity of invention with each other as each methods comprises unrelated steps, use different products and produce different effects.

37 CFR 1.475 does not provide for multiple products and/or methods within a single application. Therefore, inventions of Group I - II lack unity of invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
